# Domesday book

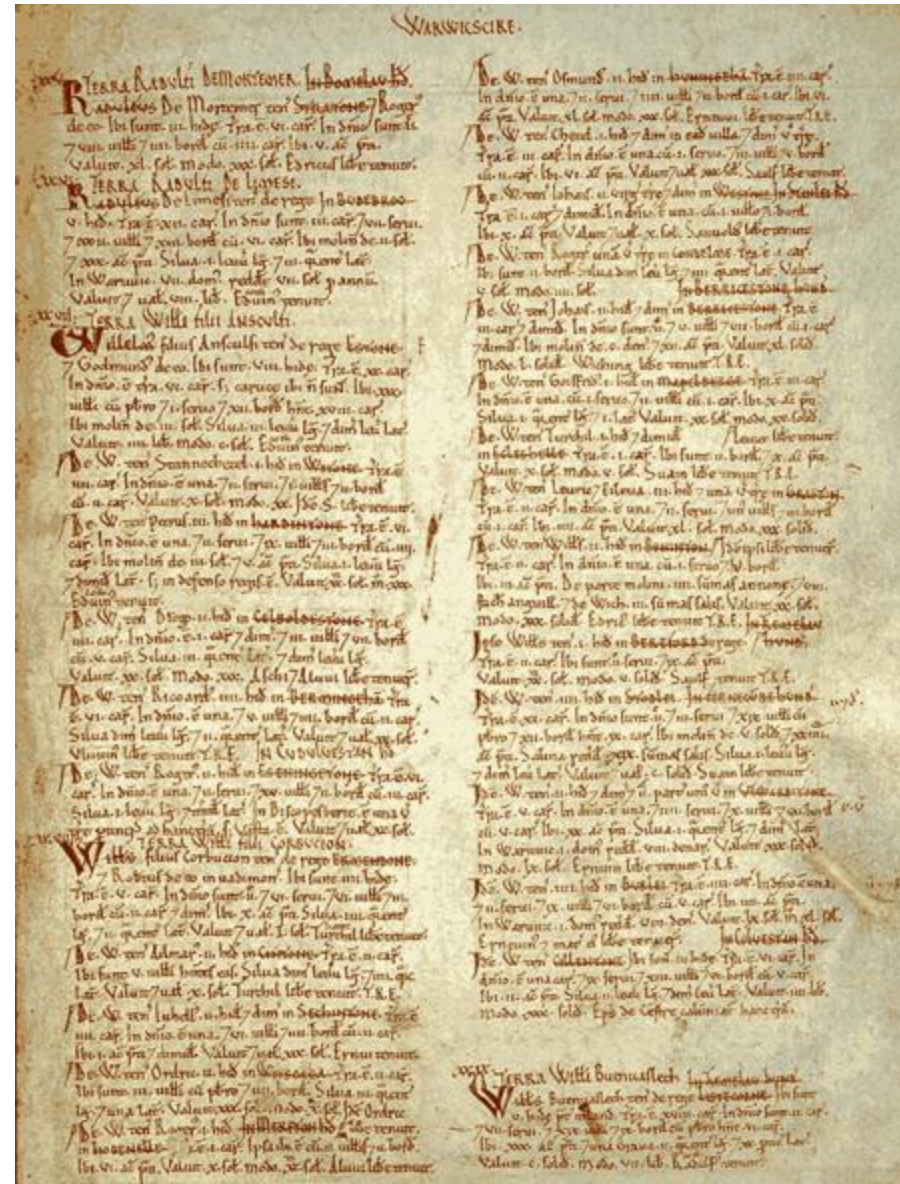

- Books compiled between January 1086 and September 1087
- Average of 44 lines of writing per page
- Some 200 sheep died to make Little Domesday book
- Whole value of places surveyed was £78,000 - value today is £3 trillion
- Book can still be used today in court for property disputes

- Domesday was originally kept with the royal treasury at Winchester.
- But from the early 13th century, when it was not travelling around with the King, it was housed in Westminster at first in the palace and then in the abbey.
- From about 1600 it was kept in a large iron-clad chest and reinforced with iron straps. The chest had three different locks, the keys to which were divided between three different officials, so that it could only be opened by consent of all three.
- In 1859 Domesday was removed to the new Public Record Office in Chancery Lane, London. In 1996 it was brought to The National Archives, Kew.

# Kto to spisał?

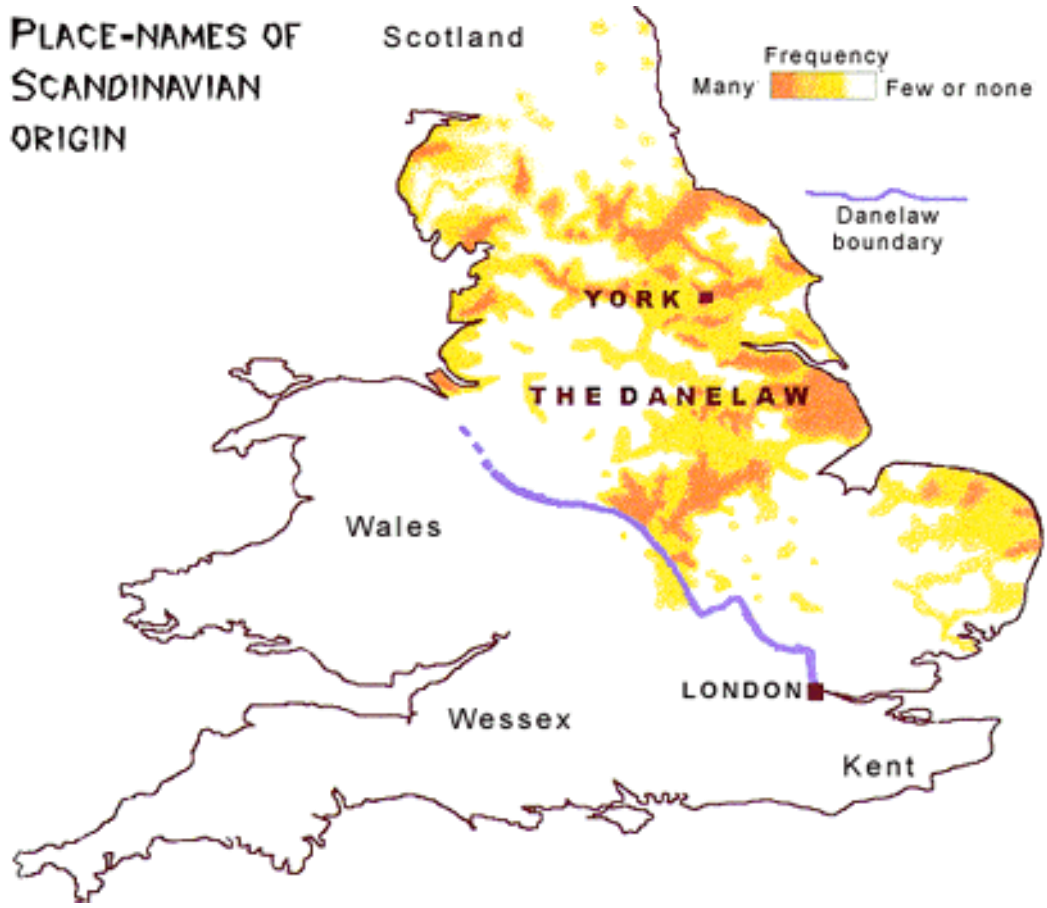

- **Ranulf Flambard** (sometimes **Ralph Flambard**, **Ranulph Flambard**, or **Ranulf Passiflamme**; c. 1060 – 5 September 1128) was a medieval Norman Bishop of Durham and an influential government minister of King William Rufus of England. Ranulf was the son of a priest of Bayeux, Normandy, and his nickname Flambard means incendiary or torch-bearer, and may have referred to his personality. He started his career under King William I of England, probably in the compilation of the **Domesday Book**, as well as being the keeper of the king's seal. On the death of William I, Ranulf chose to serve the new king of England, William Rufus.

- The Domesday Book (1086) entry for Keighley reads "In Chichelai, Ulchel and Thole and Ravensuar and William had six carucates to be taxed" (a carucate is the farmland which could be cultivated with one plough and a team of eight oxen in a year: 100 - 120 acres). The Old English name Chichelai means that Cyhha, an Anglo-Saxon thane, had originally cultivated a forest clearing (-ley). Domesday tells us that William was also taxed on a carucate in Utley (Utta's clearing) and another at Newsholme (new houses); he and Gamelbar shared another at Oakworth (oak-tree enclosure); Gamelbar held another three at Wilsden (Wifel's valley); Ravensuar also held two at Laycock (small stream); Ardulf, one at Riddelesden (Rethel's valley), four at Morton (moorland farmstead) and half at Hainworth (Hagena's enclosure); Ernegis had half a carucate at Hainworth and one at Marley (a clearing frequented by martens)... "and they are waste" referring to William the Conqueror's harrying of the North after a failed revolt.

### What does the Domesday Book contain?

There are some 13418 towns and villages recorded in the Domesday Book, covering 40 of the old counties of England. The majority of these still exist in some form today.

Click on a county name on the map to continue, or use the list of links below it. To see full names of counties hold your mouse over the name.

NOTE: Some places now in modern day Wales are listed under the nearest English county in the Domesday Book. Some major cities like London and Winchester were not recorded; Greater London boroughs are in Middlesex; Northumberland did not exist.

# The BBC Domesday Project - November 1986

- <http://www.domesday.org.uk/>

A Domesday system at the [VCF-GB 2010](#)

# Adrian Pearce

- If you are looking for the on-line version of the 1986 BBC Domesday produced by Adrian Pearce, sadly it is no longer available.

# BBC DOMESDAY

- The **BBC Domesday Project** was a partnership between:
  - Acorn Computers,
  - Philips,
  - Logica
  - and the BBC
  - (with some funding from the European Commission's ESPRIT programme)
- The Domesday Project overall it cost **£2.5 million (around \$3.75 million)** and can now be seen as a landmark in the imaginative and innovative use of information technology.
- In 1986, 900 years after William the Conqueror's original Domesday Book, the BBC published the Domesday Project. The project was probably the most ambitious attempt ever to capture the essence of life in the United Kingdom. Over a million people contributed to this digital snapshot of the country.

# BBC DOMESDAY

- Schools and community groups surveyed over 108,000 square km of the UK and submitted more than 147,819 pages of text articles and 23,225 amateur photos, cataloguing what it was like to live, work and play in their community.
- The original intention was to sell the product at around £1,100 (\$1,650) but escalating costs led to the discs and hardware being made available as a package in 1986 at a price of over £4,000 (\$6,000). While it was bought by higher education institutions, the price appears to have proved too high for much of the target market, and uptake was limited. Many of the contributors never saw the results of their work.

# BBC DOMESDAY

- The project was stored on adapted laserdiscs in the LaserVision Read Only Memory (LV-ROM) format, which contained not only analogue video and still pictures, but also digital data, with 300 MB of storage space on each side of the disc. Data and images were selected and collated by the BBC Domesday project based in Bilton House in West Ealing. Pre-mastering of data was carried out on a VAX-11/750 mini-computer, assisted by a network of BBC micros. The discs were mastered, produced, and tested by Philips at their Eindhoven headquarters factory. The user interface consisted of the BBC Master's keyboard and a trackball (known at the time as a trackerball). The software for the project was written in BCPL (a precursor to C), to make cross platform porting easier, although BCPL never attained the popularity that its early promise suggested it might.
- The project was split over two laserdiscs:
  - The *Community Disc* contained personal reflections on life in Britain and is navigated on a geographic map of Britain. The entire country was divided into blocks that were 4 km wide by 3 km long, based on Ordnance Survey grid references. Each block could contain up to 3 photographs and a number of short reflections on life in that area. Most, but not all, of the blocks are covered in this way. In addition more detailed maps of key urban areas and blocks of 40x30 km and regional views were captured, allowing "zoom-out" and "zoom-in" functions. The community disc was double sided, with a "Southern" and a "Northern" side, although country-wide data at the 40x30km level and above was on both sides.
  - The *National Disc* contained more varied material, including data from the 1981 census, sets of professional photographs and VR-like walkarounds shot for the project. Side 2 of the National disc contained video material. The material was stored in a hierarchy and some of it could be browsed by walking around a virtual art gallery, clicking on the pictures on the wall, or walking through doors in the gallery to enter the VR walkarounds. In addition a natural language search was provided via an English stemming and matching algorithm to a set of keywords.

# Domesday 25th Anniversary Event

- Submitted by Darren Grant on Mon, 12/12/2011 - 11:42pm
- A new BBC Domesday multi-media touchtable has been unveiled at The National Museum of Computing (TNMOC) to celebrate the 25th anniversary of the BBC Domesday project, and the completion of the 2011 Domesday Reloaded project. Peter Armstrong, who led the original project gave a short speech about the project and the new table in the video below.

## MY HOUSE IN NORWICH

My house was built in 1910 it has seven rooms, three bedrooms, a sitting room, dining room, kitchen and a bathroom. Most of the houses are terraced. My dad built a garage and a bathroom. In our front door there are stained glass windows, but they are very loose from people slamming the door. Our garden is quite small due to our garage. We have two cars. We used to have a coal fire but now we have a gas fire because we have had central heating installed. I live on Glebe Road which is just off Unthank Road. To get to our back door we have an alley which leads to all of the houses, it is open to cars as well.

## Digital Domesday Book lasts 15 years not 1000

Advertisement

It was meant to be a showcase for Britain's electronic prowess - a computer-based, multimedia version of the Domesday Book. But 16 years after it was created, the £2.5 million BBC Domesday Project has achieved an unexpected and unwelcome status: it is now unreadable.

The special computers developed to play the 12in video discs of text, photographs, maps and archive footage of British life are - quite simply - obsolete.

As a result, no one can access the reams of project information - equivalent to several sets of encyclopaedias - that were assembled about the state of the nation in 1986. By contrast, the original Domesday Book - an inventory of eleventh-century England compiled in 1086 by Norman monks - is in fine condition in the Public Record Office, Kew, and can be accessed by anyone who can read and has the right credentials. 'It is ironic, but the 15-year-old version is unreadable, while the ancient one is still perfectly usable,' said computer expert Paul Wheatley. 'We're lucky Shakespeare didn't write on an old PC.'

Speed:	15.5 knots (28.7 km/h; 17.8 mph)
Capacity:	c. 160,000 tonnes of cargo
Crew:	42

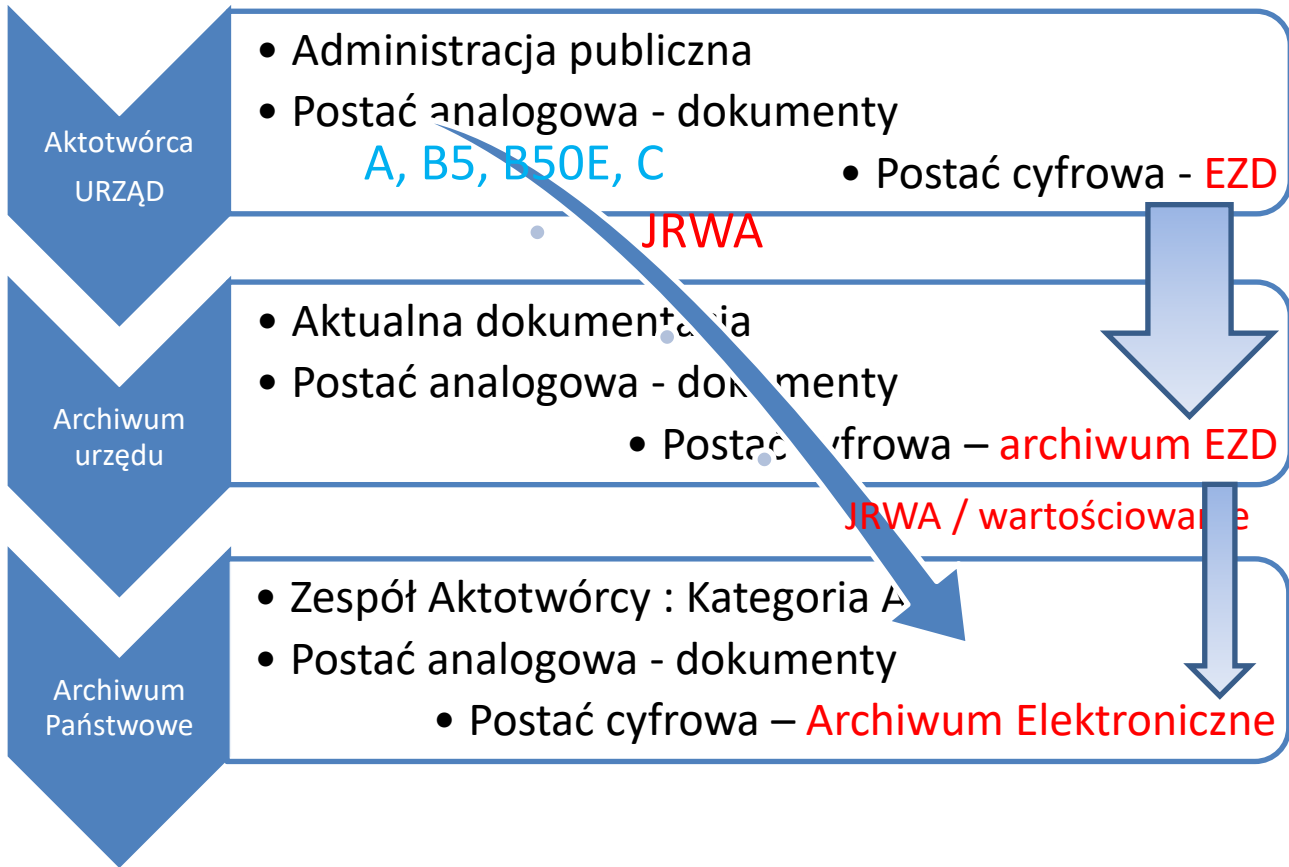

# ***MV Derbyshire***

- ***MV Derbyshire*** was an ore-bulk-oil combination carrier built in 1976 by Swan Hunter, as the last in the series of the *Bridge*-class sextet. She was registered at Liverpool and owned by Bibby Line.
- She was lost September 9, 1980 during Typhoon Orchid, south of Japan. All hands (42 crew and two women married to crew members) were lost. At 91,655 gross tons she was, and remains, the largest British ship ever to have been lost at sea.
